

NOTES

There are various reasons why resetting the database location may be necessary.

Examples:

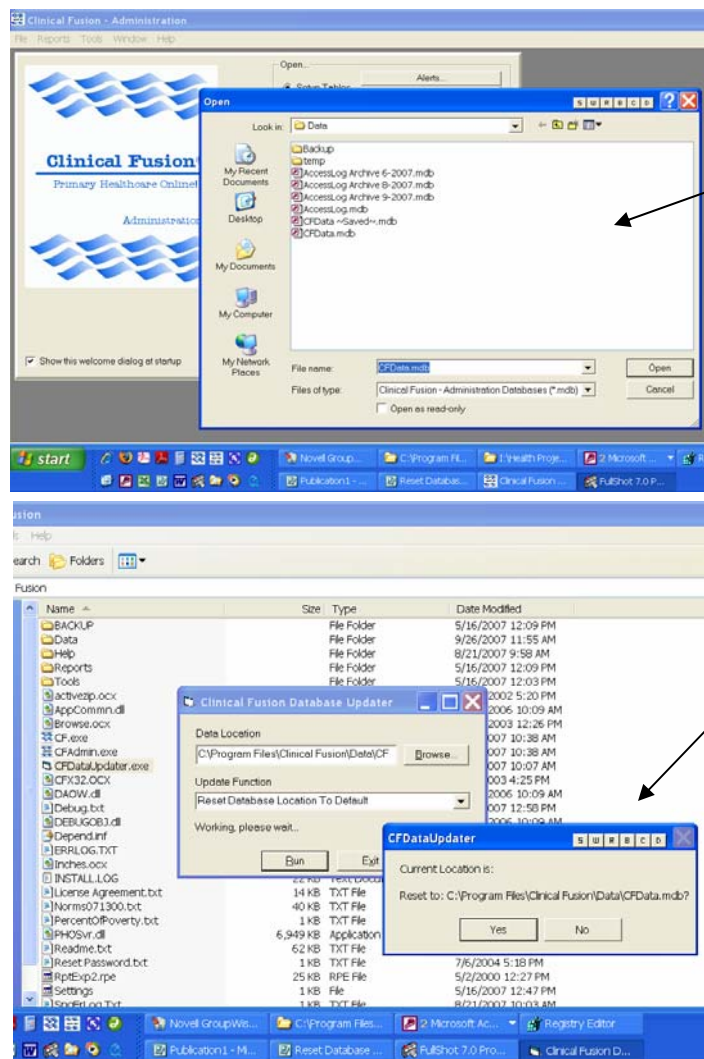

- ◆ Change database to a network from the default location on a hard drive
- ◆ Change database location on a network
- ◆ The software update reset the location

There are a few options depending on the circumstances.

I have found on occasion it is necessary to reset to the default C drive and reset the password in order to get into the software.

If you need to reset the password, please contact the Maine Clinical Fusion Help Desk (207) 780-5893 or the Clinical Fusion developers (720) 777-8400

Reset Clinical Fusion Database Location

If you can still log into CF:

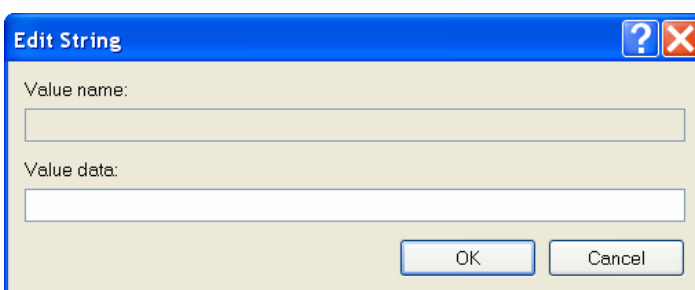

- ◆ Open CFAdmin
- ◆ File — Open Database
- ◆ Browse to the location of the CFData.mdb

If you cannot log into CF and you want to reset to the database on the default C drive:

- ◆ Open My Computer
- ◆ Open Program Files folder
- ◆ Clinical Fusion folder
- ◆ Double-click to open CFDataUpdater.exe
- ◆ In the Update Function drop-down menu choose, *Reset Database Location To Default*
- ◆ Click Run
- ◆ If the default location it lists is correct, click Yes. If it is not correct, you cannot use this method.

If you cannot log into CF and have administrative access:

- ◆ Start menu
- ◆ Run command
- ◆ Type in REGEDIT
- ◆ Open folder: HKEY_CURRENT_USER
- ◆ Open: Software folder
- ◆ Open: VB and VBA Programs folder
- ◆ Open: Clinical Fusion folder
- ◆ Click on Database folder
- ◆ Double-click Default on the right side of the screen
- ◆ Value data: type in the address of the database

Example:

C:\Program Files\Clinical Fusion\Data\CFData.mdb
